

## Mouse Anti-SARS-CoV-2 S/Spike glycoprotein IgA Antibody (SAA2227)

## Summary

| Catalog No.           | RVV00326                                                                                                                                                            |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Clone ID              | SAA2227                                                                                                                                                             |
| Host species          | Mouse                                                                                                                                                               |
| Species reactivity    | SARS-CoV-2 (2019-nCoV)                                                                                                                                              |
| Form                  | Liquid                                                                                                                                                              |
| Storage buffer        | 0.01M PBS, pH 7.4.                                                                                                                                                  |
| Concentration         | 1 mg/ml                                                                                                                                                             |
| Purity                | >95% as determined by SDS-PAGE.                                                                                                                                     |
| Clonality             | Monoclonal                                                                                                                                                          |
| Isotype               | IgA                                                                                                                                                                 |
| Applications          | ELISA                                                                                                                                                               |
| Target                | Spike glycoprotein, S glycoprotein, E2, Peplomer protein, Spike protein<br>S1, Spike protein S2, Spike protein S2', S2                                              |
| Purification          | Protein A/G purified from cell culture supernatant.                                                                                                                 |
| Endotoxin level       | Please contact with the lab for this information.                                                                                                                   |
| Accession             | P0DTC2                                                                                                                                                              |
| Stability and Storage | Use a manual defrost freezer and avoid repeated freeze-thaw cycles.<br>Store at 4°C short term (1-2 weeks). Store at -20°C 12 months. Store at -<br>80°C long term. |
